

Smart Shading Control - English

Smart Shading Control is a UI-configurable Home Assistant integration for covers, shutters, blinds and facade shading. It combines schedules, sun position, indoor and outdoor temperatures, weather data, window/door contacts, protection rules and manual overrides in one decision engine.

- [Install](#)

Install

1. Add [this repository](#) to HACS as a custom **Integration** repository.
2. Install **Smart Shading Control**.
3. Restart Home Assistant completely.
4. Add the global configuration first and then create the required room entries under **Settings → Devices & services**.
